#### Definition

The experiment was made of 1 actions, to vary conditions in your system, and 0 probes, to collect objective data from your system during the experiment.

**Steady State Hypothesis** The steady state hypothesis this experiment tried was “**WM server is running**”.

**Before Run** The steady state was verified

Probe	Tolerance	Verified
Wiremock server is running	200	True

**After Run** The steady state was verified

Probe	Tolerance	Verified
Wiremock server is running	200	True

**Method** The experiment method defines the sequence of activities that help gathering evidence towards, or against, the hypothesis.

The following activities were conducted as part of the experimental’s method:

Type	Name
action	fixed_delay

## Result

The experiment was conducted on Wed, 19 Apr 2023 06:57:59 GMT and lasted roughly 0 seconds.
